How to Figure Net Free Ventilation Area for Rectangle/Square Vents

$$NFVA = (\text{Width} - 7.12) \times (.70) \times (\text{Louvers} - 1)$$

Example: 34" (W) x 42" (H) Vent

34.00	Outside width

<u>x .70</u>	Height of one air flow opening
18.82	Area of one air flow opening (in sq. in.)
16	Number of louvers
<u>-1</u>	Uppermost louver does not provide air flow
15	
18.82	Area of one air flow opening (in sq. in.)

Important Fire Safety information - When rigid siding is exposed to significant heat or flame, the vinyl will soften, sag, melt, or burn, and may thereby expose material underneath. Care must be exercised when selecting underlayment material because many underlayment materials are made from organic materials that are combustible. You should ascertain the fire properties of underlayment materials prior to installation. All building materials should be installed in accordance with local, state and federal building code and fire regulations.
